Profile

Interdisciplinary AI governance and privacy engineering applicant with training in behavioral science, technology ethics, quantitative research, and policy analysis. Develops traceable governance artifacts that connect legal sources, machine-readable controls, operational evidence, risk workflows, and human review.

Selected Privacy Engineering & AI Governance Projects

AI-Generated Actor Compliance Assessment

Privacy Engineering Project | 2026

- Designed a privacy engineering prototype for managing synthetic-media compliance cases from intake and risk assessment to evidence review, remediation, approval, reporting, and audit logging.
- Implemented a FastAPI reference backend with Pydantic validation, a traceable and versioned rules engine, SQLAlchemy/SQLite persistence, role-aware review actions, soft deletion, and audit logs.
- Developed canonical schemas for consent scope, identity verification, evidence status, purpose limitation, retention, training use, secondary use, and revocation.
- Built explainable assessment outputs containing triggered rules, hard stops, missing information, recommended controls, reviewer routing, and Markdown reports.
- Developed a static case-management workflow covering dashboard, review queue, intake, risks, evidence, findings, tasks, approvals, activity history, and reports.
- Applied LINDDUN threat modeling and added pytest coverage for authorization, sensitive contexts, labeling, provenance, rule precedence, access roles, audit logging, retention, and deletion.
- Technologies:** Python, FastAPI, Pydantic, SQLAlchemy, SQLite, pytest, JSON Schema, Docker, JavaScript, Git, and GitHub.

China AIGC Legal-Clause-to-Control Framework

AI Governance Research Project | 2026

- Developed a research framework for transforming selected Chinese AIGC legal provisions into structured legal norms, traceable controls, runtime evidence schemas, and review-routed evaluation results.
- Designed canonical YAML and JSON artifacts covering legal source, normative fragment, actor, modality, action, object, trigger, exception, timing, evidence requirements, ambiguity, automation profile, and review status.
- Distinguished legal applicability, evidence-test execution, and final compliance conclusions to prevent deterministic field checks from being represented as automated legal interpretation.
- Built schema, traceability, source-integrity, runtime-evidence, and evaluator validation across 11 canonical norms, 12 controls, and 21 designed cases.
- Classified controls as direct legal requirements, derived organizational assurances, or technical implementations, with separate author and legal-expert review status.
- Developed an IEEE-style research paper and independent-review protocol for second-coder review, qualified legal review, and transparent adjudication.
- Technologies:** Python, YAML, JSON Schema, pytest, SHA-256 integrity validation, XeLaTeX, TikZ, and GitHub.

NIST AI RMF Compliance Dashboard

AI Governance Project | 2026

- Mapped AI systems against Govern, Map, Measure, and Manage with maturity scoring, missing-control analysis, and reviewer-oriented evidence prompts.
- Translated NIST AI RMF concepts into a compact, inspectable dashboard for structured governance review.

Experience

FaceMarket

Shenzhen, China

Researcher

Jun 2026 - Present

- Research face identity, digital assets, synthetic-media markets, and digital-replica use cases to support product and compliance strategy.
- Translate platform risks involving consent, provenance, identity misuse, deepfake abuse, and secondary commercialization into research briefs and governance recommendations.

Best Top Consulting Pte Ltd

Singapore / Remote

AI Product Development Intern

May 2025 - Aug 2025

- Revised AI prompt design around a 16-dimension psychological assessment framework and supported AI assessment workflows covering 1,800+ job records.
- Tested prompt performance with engineering teams and documented system-response and workflow principles.

The Chinese University of Hong Kong

Shenzhen, China

Research Assistant, Organizational Behaviour

Jan 2026 - Present

- Support bilingual survey design, scale review, labor-market data preparation, and literature synthesis on AI, job search, and career behavior.

Education & Research

The University of Hong Kong

Hong Kong

M.A. in AI, Ethics and Society

Sep 2025 - Jun 2026 (expected)

Lingnan University

Hong Kong

B.Soc.Sc. in Business Psychology

Sep 2021 - Aug 2025

Dean's List (2023, 2024, 2025)

Publication / Working Paper: Wang, H.*, Cheng, Y.*, van Gool, P., & Zhang, Z. *Navigating Diversity: The Role of Network Crafting in Resource Enrichment Across Work and Home*. *Revise & Resubmit, Career Development International*. *Co-first authors.

Technical Skills

Programming & Data: Python, pandas, SQL, JSON, JSON Schema, YAML

Backend & Development: FastAPI, Pydantic, SQLAlchemy, SQLite, pytest, Docker, Git, GitHub, JavaScript, Next.js

Privacy Engineering & AI Governance: Privacy-by-design, consent and purpose limitation, data lifecycle mapping, evidence mapping, retention and deletion, audit logging, LINDDUN, NIST AI RMF, rules as code, policy-to-control translation, synthetic-media governance

Research: Survey design, longitudinal research, SEM, multilevel analysis, legal-source annotation, traceability validation
